

DRIVE REVENUE REDUCE COSTS WITH P-POD

How to double your revenue and increase profit margins with P-Pod?

In this post, P-Pod would like to share three ways that our customers have increased, doubled, and tripled revenue for their portable restroom rental business. Additionally, these practices have increased profit margins in the portable restroom rental industry.

1. Larger Events, Larger Territory:

Customers have been able to increase capacity and double transportation volume by using P-Pod. Instead of placing 10 restrooms on a truck, they are now placing 20-30 restrooms and servicing larger events in further event locations. This additional outreach allows them to serve customers further, better, and more efficiently.

2. Reduce Transit Costs:

What better way to increase profit margins than to reduce costs. Customers have reported saving 60%+ of transportation costs in terms of time, fuel, and overhead. Using P-Pod's collapsible technology, these innovative businesses have been able to carry more while doing less.

3. Storage Space:

Our P-Pod families have been able to reduce space needed to store units up to 3 times due to the stacking ability of P-Pod. This smaller footprint allows customers to stack and use more space for their business needs. These businesses have become efficient machines who stay organized, clean, and coordinated.
